

18 Creating Images with KIWI

KIWI is a system for creating operating system images. With KIWI you can create LiveCDs, LiveDVDs, flash disks to use for Linux-supported hardware platforms and virtual disks for virtualization and cloud systems (like Xen, KVM, VMware, EC2 and more). The images created by KIWI can also be used in a PXE environment to boot from network.

For comprehensive KIWI documentation, see <https://github.com/openSUSE/kiwi> or install the `kiwi-doc` package on your system.

With YaST Image Creator, SUSE Linux Enterprise Server also provides a graphical interface for KIWI. For details, refer to *Chapter 22, Creating Images with YaST Image Creator*.
