

18 Creating Images with SUSE Studio

SUSE Studio is an online image creation tool which allows you to build and test appliances in a Web browser. It supports creation of virtual appliances and live systems, based on either openSUSE or SUSE Linux Enterprise. Apart from the publicly hosted SUSE Studio release that is available at <http://susestudio.com/>, there is also SUSE Studio Onsite. It is a SUSE Studio release intended for installation on a server machine behind the firewall.

For the SUSE Studio Onsite documentation, see https://www.suse.com/documentation/suse_studio/. For the SUSE Studio documentation, refer to <https://susestudio.com/help/>.
